

Pulse360 Electrical Maintenance Program

One Partner. One Program. Total Peace of Mind.

Many industrial facilities perform some level of electrical preventive maintenance, but maintaining a structured program that supports safety, compliance, and long-term reliability can be challenging. NFPA 70E and NFPA 70B establish clear expectations for electrical safety and equipment maintenance, yet many organizations struggle to manage these requirements in a coordinated way. This often results in:

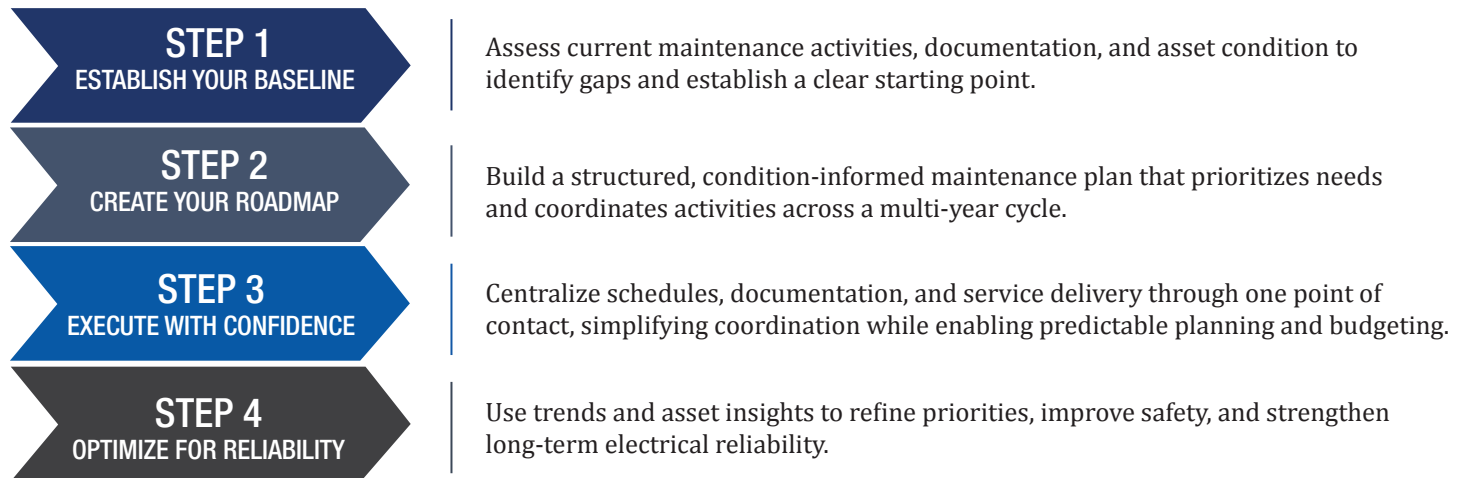

- ▶ **Multiple Vendors**
- ▶ **Scattered Documentation**
- ▶ **Inconsistent Schedules**
- ▶ **Missed Risks**
- ▶ **Budget Surprises**

Pulse360 brings it all together into one coordinated program: one partner, one roadmap, one source of accountability.

What is Pulse360?

Pulse360 is a structured electrical maintenance program that helps industrial sites move away from reactive, one-off maintenance toward a predictable, risk-based approach aligned with NFPA 70E & 70B. It's designed to protect people, protect assets, and protect your time.

The Pulse360 Journey: From Compliance to Confidence

The Business Impact of Pulse360

Organizations implementing structured programs typically experience:

- | Reduced unplanned downtime & fewer emergency repairs
- | Improved audit readiness and NFPA 70E & 70B compliance
- | Extended life of critical electrical assets
- | Lower long-term capital replacement costs
- | Reduced safety risks associated with electrical failures
- | Predictable maintenance budgets by spreading investments over the life of the program

Example of a Pulse360 Electrical Maintenance Program

Task/Activity	Year 1	Year 2	Year 3	Year 4	Year 5
Arc Flash Assessment	☑	Maintain & Update	Maintain & Update	Maintain & Update	Maintain & Update
Breaker Injection Testing			☑		
Infrared Scanning & Visual Inspection	☑	☑	☑	☑	☑
Grounding Audit & Testing	☑			☑	
De-Energized Maintenance & Cleaning	☑		☑		☑

**Additional services may be added to the maintenance plan, including:*

Power & System Health	Asset Testing	Safety & Compliance	OT & Cybersecurity
Power Quality & Harmonic Analysis	Transformer Oil Analysis	Elevator Hazard Monitoring (HazMon) System Audits	OT Cybersecurity Assessment
Power Factor Correction Systems	UPS & Battery System Testing	Electrical Connection Torque Verification	Network Architecture Review
Load Monitoring & System Trending	Protective Relay Testing	Electrical Safety Program Reviews	Controls & Automation Audit
Energy Monitoring & Reporting	Motor Circuit Analysis	Lockout/Tagout Procedure Reviews	Asset Inventory & Risk Assessment

No two facilities are identical; Pulse360 is designed to scale and adapt. You can add or remove services, adjust frequencies, and expand across additional facilities.

Pulse360 unifies NFPA 70E & 70B into a contractor-managed program tailored to your facility, schedule, and long-term goals, delivered by a full turnkey provider with nationwide regional support. Contact us today at Pulse360Team@interstates.com
