OPERATIONAL TECHNOLOGY
PATCHING SOLUTION

WHY CHOOSE OUR PATCHING SOLUTION?

Manufacturing plants cannot operate efficiently with the uncertainty that comes from pushing patches automatically. Take control of your manufacturing endpoints today with our OT Patching Solution. Our unique industrial patching solution will give you more features and flexibility for your high availability systems. Our service can safely and accurately inventory every machine in your plant. You'll have the ability to push and install custom software or make registry changes to machines with ease.

Increase Uptime

Unplanned outages can have a devastating impact on your plant and your business. We focus on planned, controlled service delivery to keep your machines running smoothly. From Active Directory services to networking and virtual services, we have you covered.

Controls Experience

We understand the complexity of control systems software in an OT environment. Our skilled teams bring years of experience and control systems software knowledge. Our solutions are custom built for Rockwell, Wonderware, Honeywell or other automation software installed applications.

24/7 Support

Rest assured, our certified experts will be available to you 24/7. Should an issue arise, our Global Operations will quickly respond. Using our years of experience, we will provide you with the most efficient solution possible and assist you every step of the way.
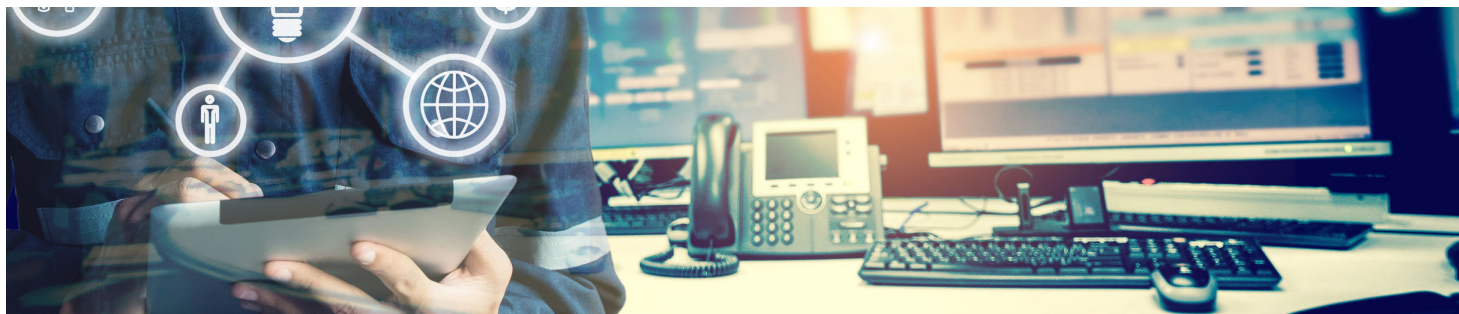

Stay Secure

OT machines are vulnerable to critical security flaws like WannaCry or DejaBlue. Major global manufacturing companies suffered plant downtime and lost billions of dollars in revenue due to of those exploits. Interstates kept our customers safe, without any downtime, and deployed the necessary patches to our global client base in a planned and controlled manner.

INTERSTATES

THE PATCHING CYCLE

| Patch Tuesday | > > > | Vendor Testing | > > > | Baselines | > > > | Deployment |

Patch Tuesday Patches are Available	Vendor Testing Install/Validate/Report	Baselines and Patches Available in Our Solution	Patch Deployment and Reporting
MS releases patches.	Rockwell, Honeywell, Wonderware test the MS patches.	Baselines built for each version of vendor software.	Interstates deploys AutoPatch machines.
Patches available in our solution.	Interstates collects patch results.	Our solution identifies which machines need patches.	Interstates deploys SchedulePatch machines.
Our solution identifies software inventory from devices.	Review and compare it to our environment.	Baselines show as relevant based on client software installed.	Site personnel deploys to ManualPatch machines.
Our solution determines which machines need which patches.	Publish the report of approved patches.		Cybersecurity reports updates automatically.
Patches show as relevant on Microsoft 'generic' machines.	Optional: Interstates will test older obsolete control versions.		Interstates produces a monthly report.

NOW IS THE TIME TO ACT

Managing and controlling the machines in your facility doesn't have to be complicated. Our industry-leading OT Patching Solution provides you with highly reliable tools and access to the expertise needed to streamline your processes, eliminating any downtime that may impact your operations. Our certified team will work with you to implement this unique solution as quickly and efficiently as possible.

DIG INTO OUR SOLUTION
