

OPERATIONAL TECHNOLOGY VIRTUALIZATION SERVICES

Maximize your day-to-day operations with an enhanced virtualization infrastructure from Interstates.

BENEFITS

Cost Savings

Easy to Use

Reduces Future Downtime

Proactive Recommendations for the Future

TURNKEY VIRTUALIZATION SOLUTION

Virtualization Management can help to reduce downtime at your plants with a solution that is both proactive and reactive. Interstates provides resource recommendations based on your usage trends and future site projects, making sure you have the best solution going forward into the future. From audits to installs to covering system alerts – Interstates has the time-tested expertise to support your virtual infrastructure needs.

IMPROVE YOUR INFRASTRUCTURE

Interstates’ Virtual Design services will help you achieve a robust virtual infrastructure, and our management solution will provide support for your day-to-day operations. Let us use our industry expertise to audit your existing infrastructure and migrate systems into a fully redundant virtualized environment.

Virtualization eliminates the traditional process of system errors. For example, if a physical server workstation goes down, you’ll need to call a tech person and wait for hours for them to fix the problem. With virtualization, you can watch your back up system recognize it’s down and start up again with no downtime. If no virtualization solution exists, Interstates will provide a roadmap and services to migrate physical systems to new virtualization infrastructure solutions.

CORE SERVICES

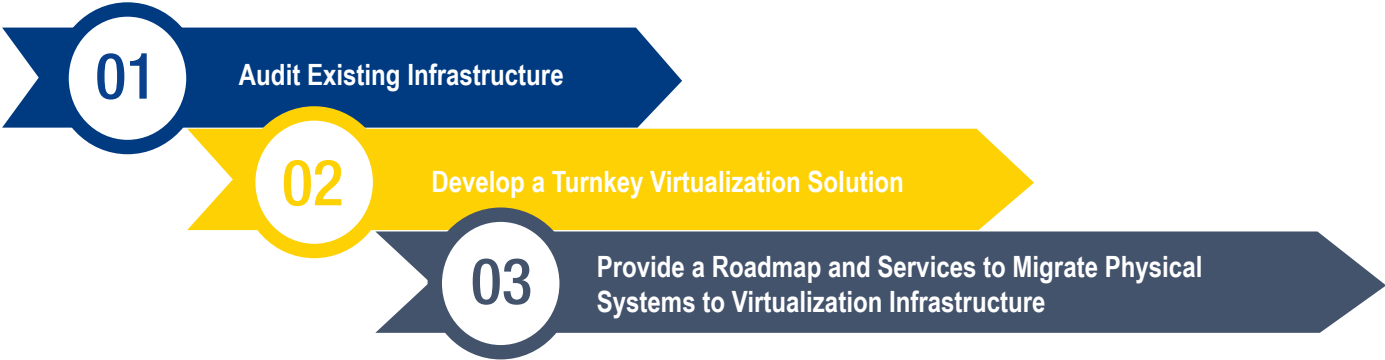

Infrastructure Audit | Virtualization Design | Physical Systems Migration & Installs
| Daily Virtualized Support

TURNKEY VIRTUALIZATION SOLUTION

If you want to eliminate downtime at your plants with a solution that is both proactive and reactive, discover the benefits of Virtualization Management. Instead of upgrading individual servers, we move your vital systems to a virtual server that is easier to manage and more cost-effective. Interstates provides resource recommendations based on your usage trends and future site projects, making sure you have the best solution going forward into the future. From audits to installations to monitoring and managing system alerts – Interstates has the time-tested expertise to support your virtual infrastructure needs.
